

FIBERPANEL® HC

Less weight. More payload.

You can increase your payload capacity and reduce your operating cost per load with the light, strong, and tough FiberPanel® HC side wall.

The FiberPanel HC's high strength-to-weight ratio comes from its honeycomb structure – a design technology commonly used in the automotive and aircraft industries.

And, its white interior provides a bright work environment.

Available on Signature Van Body or Iner-City® trucks up to 16', FiberPanel HC is an ideal choice for delivery truck fleets because its side wall construction:

Contains a lightweight, durable fiberglass-reinforced, gelcoated honeycomb material

Increases payload capacity for lower overall operating cost per load

Provides a seamless, smooth exterior surface for excellent brand graphics application

Includes a polypropylene core that does not absorb moisture – protecting against water damage to allow for longer life
